PROFESSIONAL SUMMARY

Senior Software Engineer with 6 years of experience building distributed backend, full-stack, and AI systems across logistics, compliance SaaS, and automotive platforms. Strong in C#/.NET, Angular/React, PostgreSQL/SQL Server, AWS, and applied Generative AI — recently designed and shipped a production-grade LLM/RAG backend using Python, FastAPI, OpenAI, and hybrid retrieval. Leads a 6-developer team across architecture, sprint planning, releases, and client communication.

CORE TECHNICAL SKILLS

Languages: C#, Python, TypeScript, JavaScript, SQL

Backend & Frontend: .NET 8/9/10, ASP.NET Core, FastAPI, Node.js, Angular, React/Next.js, SignalR, REST APIs, RxJS

AI & LLM Engineering: RAG, LLM integration (OpenAI GPT, embeddings), Generative AI, prompt engineering, LangChain, Semantic Kernel, Cohere reranking, vector databases (Qdrant, pgvector), hybrid search (BM25, RRF)

Architecture & Messaging: Clean Architecture, CQRS (MediatR), modular monoliths, microservices, Domain-Driven Design, event-driven systems (Kafka, MassTransit, transactional outbox), SOLID

Data & Cloud: PostgreSQL, SQL Server, Redis, EF Core, Dapper, AWS (EC2, S3, ECS Fargate, RDS, Secrets Manager), Azure (Functions, Blob Storage, DevOps), Docker, GitHub Actions, IBM Cloud

Quality & Security: xUnit, Testcontainers, architecture tests, pytest, SonarQube, Serilog/Seq, Prometheus, Keycloak, SSO/OIDC, JWT, RBAC, Agile/Scrum, AI-assisted engineering (Cursor, Claude Code)

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Brain Station 23 PLC, Dhaka

Jul 2025 – Present

- Lead a 6-developer team and partner with 2 business analysts across requirements, architecture, sprint planning, code reviews, releases, and production support.
- Drive presales and project onboarding — client requirement analysis, solution proposals, and end-to-end effort estimation (WBS) — while supporting legacy client projects in production.
- Apply AI-DLC (AI-driven development lifecycle) across the team — AI coding agents integrated into plan, implement, test, and review workflows.
- Architect TPSaaS, a multi-tenant vendor-risk and compliance SaaS (.NET 8, Next.js/React 19, PostgreSQL, CQRS/MediatR) spanning 413 REST endpoints, 342 command/query handlers, and 54 feature modules.
- Top contributor (~45% of 3,240 commits) across backend and frontend; built tenant isolation with EF Core global query filters, OIDC single sign-on (Azure AD, Okta, Auth0), and multi-layer RBAC.
- Delivered Stripe subscription billing with webhooks, BitSight security-ratings integration with encrypted tokens and API audit logging, SignalR notifications, SES bounce tracking, and 13 Hangfire jobs.
- Deployed on AWS ECS Fargate, RDS PostgreSQL, S3, Secrets Manager, and ElastiCache Redis across development, UAT, and production environments.

Key Project — Automotive AI Platform & RAG Chatbot (Global Automotive Client)

- Designed a .NET 9 modular monolith of 11 services with Keycloak OIDC, Kafka/MassTransit eventing over a transactional outbox, PostgreSQL 17, and Redis.
- Sole-authored the Python/FastAPI RAG backend: hybrid retrieval (dense + BM25 sparse, RRF fusion, Cohere reranking), four-layer Redis caching with singleflight locks, SSE streaming, multi-tenant-ready Clean Architecture.
- Raised exact-entity keyword recall@100 from 96.9% to 100% and achieved a 100% disambiguation win-rate across 27 cases, verified by an automated evaluation harness.
- Gate releases on measurable SLOs — ≥70% standard-answer rate, ≥80% citation coverage, ≤2% error rate — backed by 585 platform tests plus 196 RAG tests, architecture-boundary checks, and behavioral evals.
- Shipped the companion mobile app and sole-authored the .NET 9 mobile BFF; wired the .NET content platform to RAG ingestion with a live contract test.

Software Engineer – .NET & Angular | SkyTech Solutions (Codezzi), Dhaka

Jan 2025 – Jul 2025

- Delivered CRM backend and frontend features in .NET Core and Angular — interactive dashboards, employee reports, REST APIs, authentication guards, interceptors, and global error handling.
- Built a WinForms (.NET Framework 4.8) and Selenium desktop product for business-data collection — MVP architecture, JSON-configurable selectors, SQLite persistence, and machine-fingerprint licensing.

- Integrated ChatGPT, Stripe, Amazon SES, and Google Ads APIs into .NET minimal APIs for campaign recommendations, payments, and email workflows.
- Developed a Google Ads management UI with Angular Material, signals, RxJS, reactive forms, conversion tracking, and multilingual white-label support.

Software Engineer – .NET & Angular | Freightoscope, FL, USA (Remote)

Jan 2022 – Present

Full-time Jan 2022 – Feb 2025; ongoing part-time consulting since Mar 2025.

- Built and evolved a freight-forwarding ERP over 4.5 years as a top individual contributor (3,600+ commits) — a 12-project .NET solution migrated to .NET 10, with Angular and SQL Server.
- Delivered features across 159 controllers, 1,000+ REST endpoints, and 526 Angular components; shipped a new Angular 20 customer portal alongside the main application.
- Integrated 25+ logistics and accounting partners — CargoAI, Freightify, WebCargo, CargoWise, Magaya, Descartes, XE.com, QuickBooks, Xero, Zoho, Netvisor — for live air/sea rates, bookings, tracking, and invoicing.
- Delivered the full rate lifecycle (bulk Excel ingestion, search, markup, quotation, booking, shipment), e-AWB workflows, and AES/ISF/AMS customs filings.
- Designed role and permission flows for forwarders, customers, agents, and shippers, including white-label email, PDF rate reports, and rate-comparison interfaces.
- Improved quotation performance with Redis caching, bulk inserts, and optimized SQL views and stored procedures; streamed thousands of live search results over Server-Sent Events.
- Released via 5 Azure DevOps CI/CD pipelines; built SignalR/Pusher real-time notifications, 300+ Stimulsoft report templates, and 6 role-based dashboards; mentored 2 junior developers.

Software Engineer – .NET (Part-time) | Quadri Technologies LLP (Remote)

Nov 2021 – Jun 2022

- Integrated Yodlee financial-data APIs with token-based authorization in a Clean Architecture/CQRS application, persisting normalized data in PostgreSQL.
- Added repository and unit-of-work patterns plus xUnit/NSubstitute API tests to improve maintainability and release confidence.

Full-Stack Developer – Node.js & Angular | Democratik, Laval, Canada (Remote)

Dec 2020 – Jan 2022

- Built modular Angular and Node.js CRM and campaign-management features — tasks, tickets, dashboards, scheduling, and volunteer management.
- Delivered configurable form and email builders, Leaflet maps, Avery label printing, real-time Pusher chat, a Chrome extension, and a Gmail add-on.
- Guided 2 intern developers through implementation, code reviews, and engineering best practices.

Software Developer Intern – .NET | Code Source, Dhaka

Sep 2020 – Dec 2020

- Developed FarmNet, an agro-fintech platform connecting smallholder farmers with consumers and investors (ASP.NET Core MVC, EF Core, SQL Server, Identity).
- Designed the database schema and translated Figma designs into responsive interfaces with authentication and authorization.

INDEPENDENT & FREELANCE WORK

Upwork: [upwork.com/freelancers/~014a55b53d36d618d6](https://www.upwork.com/freelancers/~014a55b53d36d618d6) — 100% Job Success, 20 contracts, 2,390+ hours

- **BizXtract** — sole-authored cross-platform desktop lead-generation product (.NET 10 + Avalonia, Windows/macOS) with Velopack CDN auto-updates, one-line rollback, SQLite WAL crash recovery, and CI smoke tests (2026).
- **BizXtract licensing platform** — device-bound entitlements signed with Ed25519 on 12-hour TTLs, fail-closed client verification, 3-day offline grace, and a Stripe-to-Paddle billing migration with idempotent webhooks.
- **IBM z/OS consulting (Upwork, 2026)** — root-caused a failing BPXBATCH/JCL cloud integration to EBCDIC encoding issues; delivered production JCL and an operations runbook.
- **Mainframe modernization** — ported and extended a COBOL/CICS/DB2 airline-booking system to IBM Cloud Wazi (z/OS 3.1, CICS TS 6.2, DB2 v13), resolving 30+ environment and deployment failures; demonstrated at a conference in Japan.

EDUCATION & HONORS

Bachelor of Science in Computer Science and Engineering

Mar 2020

American International University-Bangladesh | CGPA 3.91/4.00 | Magna Cum Laude | Dean's List
